

Ex.no:6C	DATA VISUALIZATION USING POWER BI (GOOGLE TRENDS DATASET)

Aim:

To clean, preprocess, and transform the Daily Google Search Trends US dataset, load the clean data into Power BI, and build an interactive visual dashboard to analyze search trends, categories, yearly trends, locations, and query ranks.

Algorithm:

Steps:

1. Import Dataset:

Load the Daily Google Search Trends US CSV dataset into Power BI.

2. Data Inspection:

Identify the columns, data types, missing values, and duplicate records.

3. Data Cleaning

Remove duplicate rows and handle missing values in the search-query, category, year, rank, and other required fields.

4. Data Type Handling

Set Year as Whole Number, Rank and other numerical fields as Whole Number/Decimal Number, and Query, Category, and Location as Text.

5. Load Clean Data

Load the cleaned Google Trends table into Power BI Desktop using Get Data → Text/CSV or Apply & Close from Power Query.

6. Create Core Metric:

Create the measure
Average Rank = AVERAGE('Google Trends'[rank]).

7. Create Visuals:

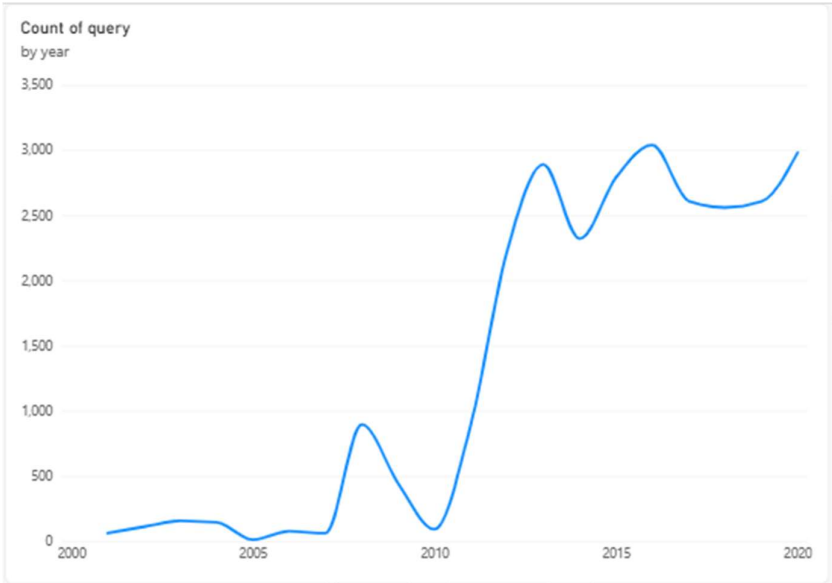

Build a line chart for the number of search trends by Year and a clustered column chart for the number of trends by Category.

8. Create Additional Visuals:

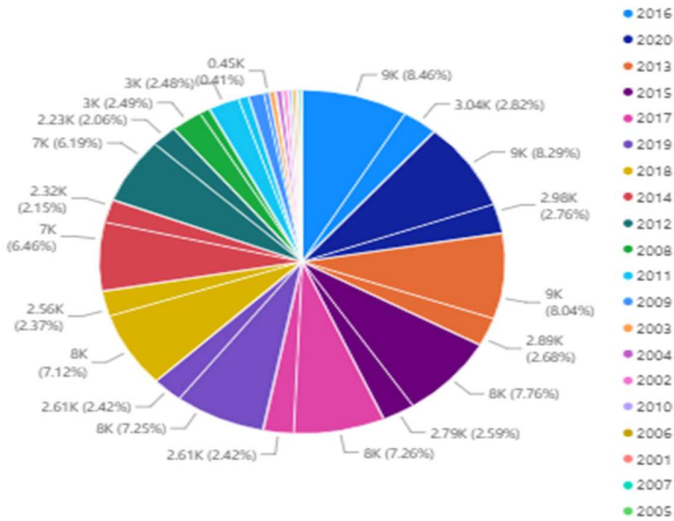

Build a pie chart for development-status distribution and a scatter chart for Schooling versus Life expectancy.

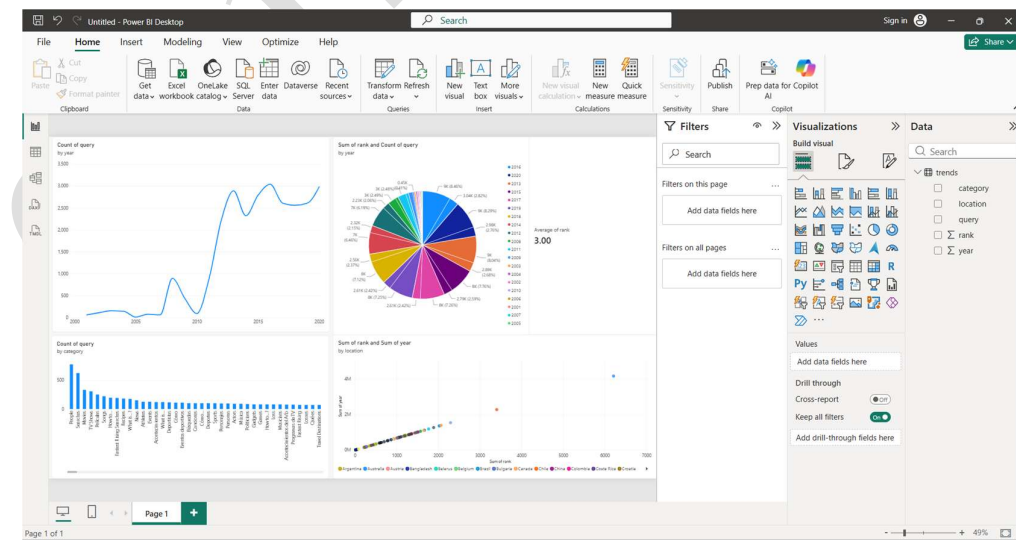

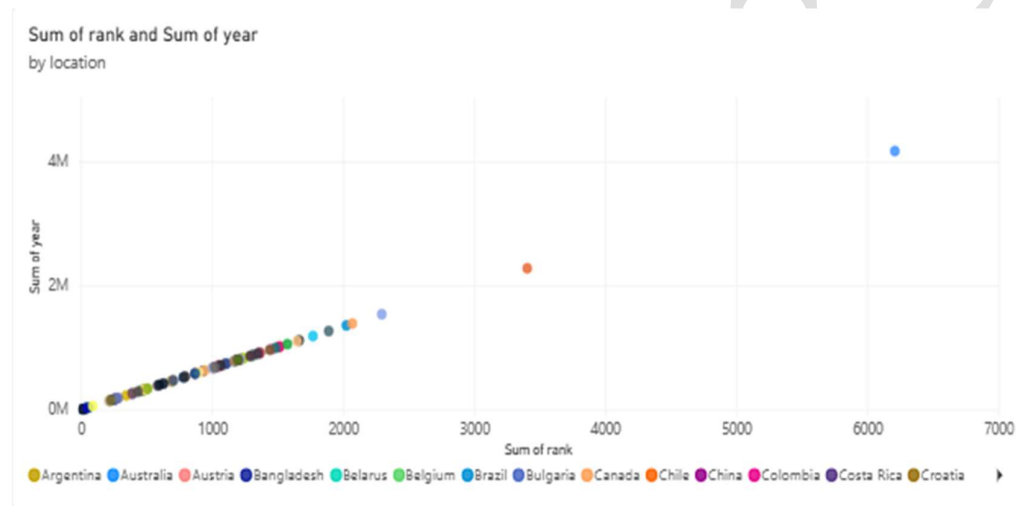

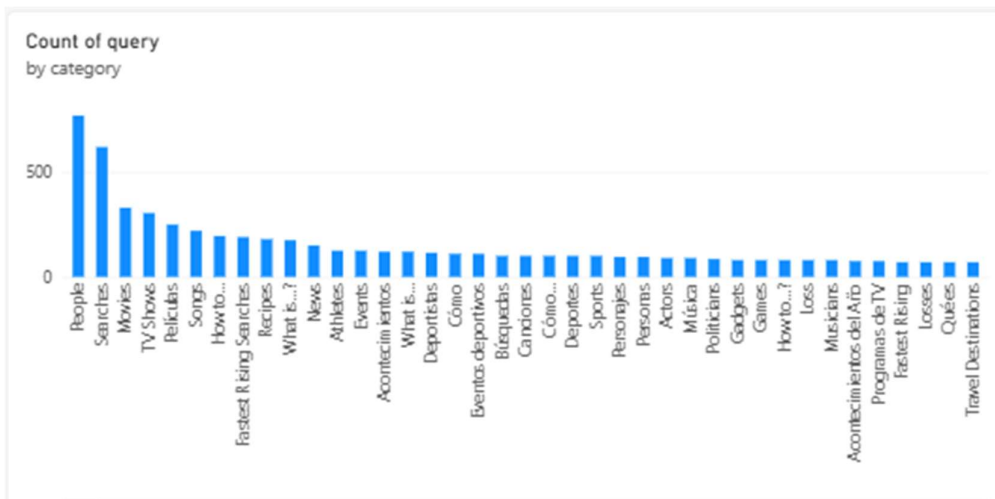

Output:

Average of rank
3.00

Sum of rank and Count of query by year

Result:
